Leatta,

I'm not sure about any previous site investigations, but we have had the facility under a wastewater discharge permit for some time. As part of the permit, Equinox Resources was required to sample surface water sites (~5 or so stations on Onion Creek and tributaries to Onion Creek) and two groundwater wells downgradient of the tailings disposal area. We have this data here, but its not in any electronic format. If you need any of these results, let me know and we can send you copies of the information.

Hi Pat,

Ecology & Environment, Inc. has been tasked by the EPA to investigate the Upper Columbia River Basin. Specifically, I am researching 79 mine sites that I will be visiting the week of June 17th. I found your name as a contact for agencies regulating activities at the Van Stone mine in a letter from Science Applications International Corporation to the EPA in 1993. Do you have any information relating to the involvement and investigations that Ecology partook in? Would it be too much of a hassle to supply me with that information?

I am trying to write my sampling plan and I need to fill in the gaps, specifically previous site investigations.

Thanks for your time,

Leatta Dahlhoff
